SUMMARY

LLM Engineer and software developer with two years evaluating frontier models from OpenAI, Anthropic, and Google at Revelo and Turing: RLHF, benchmarking, VLM datasets, and AI-generated code review. Independently built and published four mobile games on Google Play using Unity, C#, Kotlin, Jetpack Compose, and Firebase.

EXPERIENCE

LLM Engineer (AI Evaluation), Revelo Feb 2026 – Present

- Evaluate how Anthropic's frontier models handle complex logic and follow strict instruction-following constraints.
- Review AI-generated code changes in PR Writer workflows for safety, readability, and correct exception handling.
- Run head-to-head model comparisons and write targeted feedback that reduces model hallucinations.

LLM Projects, Turing Nov 2024 – Jan 2026

- Trained and benchmarked OpenAI, Anthropic, and Google models using RLHF, testing multi-step reasoning, truthfulness, and instruction following.
- OSWorld: generated structured datasets for evaluating vision-language models (VLMs) on computer-use tasks, with preprocessing and validation pipelines for multimodal consistency.
- ComputerBench Connectors: built Python backend applications replicating SaaS tools (Slack, Linear, Jira, Notion, Gmail, wikis), including integrations and full-service backend functionality.
- Contributed to SWE-bench evaluations, video captioning tasks, and offline workflow improvements; streamlined data collection pipelines for large datasets.
- Coordinated daily operations with international teammates to hit model accuracy targets on schedule.

PROJECTS

Arrow Puzzle | Unity, C#, Firebase Google Play

- Built a mobile puzzle game with 2,785 campaign levels and a deterministic, seeded level generator for endless play.
- Added Google Sign-In via Firebase Auth, Firestore leaderboards with security rules, a cross-device coin economy, and EditMode tests.

Sky Hopper | Unity 6, C#, Firebase Google Play

- Built an original one-tap arcade game with sprites, sounds, and scenes generated from code at build time.
- Added Firebase Auth (Google and guest), a Firestore leaderboard, account deletion, and 15 passing EditMode/PlayMode tests.

PaintMaze | Unity, C#, Firebase Google Play | GitHub

- Created a puzzle game with 6,500 pre-baked levels plus on-device generation for offline play.
- Engineered a custom board solver for hints and layout verification, a cache that removes loading screens, and Firebase Auth cloud saves and leaderboards.

2048 | Kotlin, Jetpack Compose, Firebase GitHub

- Developed a custom engine with 8 grid sizes (24 JUnit tests), gesture controls, and DataStore persistence.
- Linked Firebase Auth to real-time Cloud Firestore leaderboards and published a signed AAB on Google Play.

EDUCATION

BS Information Technology, Bahria University, Lahore 2023 – 2027 (expected)

SKILLS

AI & Machine Learning: RLHF, LLM Evaluation, VLM Evaluation, Model Benchmarking, Prompt Engineering, Multimodal Annotation, PyTorch, CNNs, Vision Transformers
Programming Languages: Python, C#, Kotlin, JavaScript, C++, SQL
Mobile & Game Development: Unity, Jetpack Compose, Android Studio, MVVM, StateFlow, DataStore, Google Play
Backend & Cloud: Firebase Authentication, Cloud Firestore, PostgreSQL, SQL Server, Docker
Testing & Tools: JUnit, Unity Test Framework, Git, GitHub, Gradle, VS Code, Cursor, Kaggle, Apache JMeter, Graphviz
